Summary

Python Full Stack Developer with hands-on experience in building web applications using Django, REST APIs, and modern frontend technologies. Experienced in integrating AI-powered features such as machine learning models and API-based AI tools into web applications. Strong understanding of backend development, database design, authentication, and API integration with a focus on scalable, reliable, and user-friendly systems.

Skills

Programming: Python, SQL, JavaScript

Backend: Django, Django REST Framework, RESTful APIs, JWT Authentication

Frontend: HTML, CSS, JavaScript, React (Basics)

Databases: MySQL, MongoDB, CRUD Operations, Data Validation

AI & ML: Machine Learning Basics, Model Integration, Data Preprocessing, API-based AI Tools

Tools & Platforms: Git, GitHub, Postman, AWS (Fundamentals)

Soft Skills: Problem Solving, Team Collaboration, Adaptability, Clear Communication, Time Management

Experience

Python Developer Intern

2024

Eduskill Foundation

- Developed and maintained backend modules using Python and Django for web-based applications.
- Built and tested REST APIs for authentication, data management, and business logic.
- Worked with MySQL for designing tables, writing queries, and performing CRUD operations.

Projects

AI Trace Finder – Scanner Source Identification System

2024

- Developed backend services for data preprocessing, feature extraction, and ML model integration using Python and Django.
- Implemented REST APIs to handle image uploads, processing, and prediction results.
- Integrated trained machine learning models into the web application workflow.
- Worked on data validation, error handling, and performance evaluation of the system.
- Improved system reliability by refining preprocessing logic and model output handling.

Food Connect – Food Donation & Distribution Platform

2023

- Built backend features for donor registration, food listing, pickup scheduling, and volunteer management using Django.
- Implemented authentication, role-based access, and form validations.
- Designed and connected database models for users, donations, and requests.
- Explored AI-based features such as data insights and automation to improve platform efficiency.
- Improved user experience by fixing bugs and optimizing application workflows.

Certifications

- Python for Data Science – Practical experience in data analysis, preprocessing, and validation.
- AWS Cloud Foundations – Understanding of cloud computing concepts, services, and infrastructure basics.
- Python Full-Stack Course (Kiran Academy) – Hands-on experience with Python, Django, React, and relational databases.

Education

B.E. Artificial Intelligence and Data Science

2025

P. R. Pote Patil College of Engineering & Management, Amravati

CGPA: 8.27 / 10
